Foreword

This report, *Wisconsin Deaths*, 2013, presents key information about deaths of Wisconsin residents that occurred in 2013 and previous years. Information is included on the number and rate of deaths overall and by age, sex and cause. *Wisconsin Deaths* has been published annually since the 1995 data year, and replaced the earlier report series *Vital Statistics* (data years 1984-1994), *Public Health Statistics* (1952-1983), and *Annual Report of Morbidity and Mortality* (1948-1951).

The source of data for this report is death records filed with the State Registrar, State Vital Records Office, Office of Health Informatics, Division of Public Health, Wisconsin Department of Health Services.

The Office of Health Informatics would like to recognize the following: local Register of Deeds offices and the Milwaukee and West Allis city health offices (for registering deaths), coroners, medical examiners, and physicians (for certifying causes of death), and funeral directors (for filing death certificates).

The Department of Health Services produced this publication. Staff of the Vital Records Section, Office of Health Informatics, collected and compiled the death records. Joyce Knapton prepared the report and wrote the narrative. Patricia Nametz, Bureau of Operations in the Division of Public Health, edited the report. Draft review and comments were provided by Karl Pearson in the Office of Health Informatics. The report was prepared under the supervision of Lisa Walker, State Registrar, Vital Records Section; Lisa Hebl, Supervisor, External Operations Unit, Vital Records Section; and Oskar Anderson, Director of the Office of Health Informatics.

Death, birth, hospitalization and other health-related statistical information for Wisconsin is also available through the Internet on the Department of Health Services website, at https://www.dhs.wisconsin.gov/stats/index.htm. Wisconsin Interactive Statistics on Health (WISH) is a data query system that allows users to obtain death and other data tailored to their specifications, at https://www.dhs.wisconsin.gov/wish/index.htm.

Wisconsin Deaths, 2013 Page iv

Introduction

All tables and figures in this report present Wisconsin resident data (deaths of Wisconsin residents). This means that deaths have been assigned to the area where the person lived (usually legal residence), regardless of where the death occurred. Most of the deaths reported in this publication occurred in Wisconsin, although the State Vital Records Office receives death data of Wisconsin residents from other states and countries as well.

Chapter 69 of the Wisconsin Statutes authorizes the Department of Health Services to supervise and direct the collection of death data. This statute also indicates how local registrars are to file certificates for deaths that occur in their jurisdictions.

Beginning with 1999 data, causes of death have been coded using the International Classification of Diseases, Tenth Revision (ICD-10). ICD-10 replaced the ICD-9 that was used to code death data for the years 1979-1998. ICD-10 is a classification system that was developed collaboratively by the World Health Organization (WHO) and 10 international centers to reflect advances in medical science and changes in diagnostic terminology, and to promote international comparability in the presentation of mortality statistics.

A comparability table has been prepared to assist the reader in comparing numbers of deaths by cause between 1999 (and subsequent years) and the years before 1999. The table is available on the Department of Health Services website at: https://www.dhs.wisconsin.gov/stats/deaths/index.htm.

Beginning September 1, 2013, Wisconsin deaths were no longer filed on paper death certificates as they had been in the past, but filed electronically. This report is a combination of data from paper death certificates submitted by funeral homes and data from death records filed electronically by funeral homes, so there may be some variation in the 2013 data due to differences in data format. There were 59 deaths of Wisconsin residents in 2013 that were reported as having more than one race. These deaths were not included in individual race categories, but were included in a "multiple race" category. This reporting change may lower the death rate for individual race categories.

Key Findings

- In 2013, there were 49,917 deaths of Wisconsin residents, 1,692 more than in 2012.
- In 2013, the Wisconsin death rate (deaths per 1,000 population) was 8.7, higher than the 2012 death rate (8.4).
- Age-specific death rates for males exceed death rates for females at all ages. However, among persons aged 85 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain higher). This is because many more females than males live past the age of 85.
- In 2013, cremations accounted for a majority of body dispositions in Wisconsin. Cremations constituted 51% of dispositions in 2013 (compared to 49% in 2012 and 33% in 2004); burials constituted 42% of total deaths in 2013 (compared to 44% in 2012 and 58% in 2004).
- The number of infant deaths (deaths before one year of age) increased from 385 in 2012 to 414 in 2013.
- A total of 60 deaths were reported as occurring due to injuries at work in 2013; during the 2008-2012 period, the average yearly number of deaths due to at-work injuries was 54.
- As in 2012, the two leading causes of death in 2013 were diseases of the heart and malignant neoplasms (cancer). These two causes of death accounted for 45% of total deaths among Wisconsin residents. The third leading cause of death in 2012 and 2013 was accidents.
- Accidents were the leading underlying cause of death among males age 1-44. For males aged 45 and older, cancer and heart disease were the two leading causes of death.
- Accidents were the leading underlying cause of death among females age 1-44. Cancer was the leading cause of death among women age 45-84. For women 85 years of age and older, heart disease was the leading cause.
- Diseases of the heart and cancer were the two leading underlying causes of death in each race group. In 2013, diseases of the heart accounted for 21% of deaths among blacks and American Indians, 23% of deaths among whites, and 18% of deaths among Asians. Cancer accounted for 25% of deaths among blacks, 20% of deaths among American Indians, and 23% of deaths among whites and Asians.
- Accidents were the third leading cause of death among white, black and American Indian males. Cerebrovascular disease was the third leading cause for Asian males.
- Among females in every race group, diseases of the heart and malignant neoplasms (cancer) were the two leading causes of death in 2013.
- Cancer and diseases of the heart were the leading causes of death among Hispanics/Latinos in 2013. Cancer accounted for 23% of deaths among both Hispanics/Latinos and non-Hispanics in 2013.
- There were 12 maternal deaths in 2013, more than the average annual number during the preceding five-year period. From 2008 to 2012, the average annual number of maternal deaths was 10. Maternal deaths are deaths attributed to pregnancy-related health conditions or events of delivery.

U.S. death rates through 1995 are final data from the *Monthly Vital Statistics Reports* of the National Center for Health Statistics; this report is now titled *National Vital Statistics Reports*. U.S. death rates for 2000-2012 are final data from the *National Vital Statistics Reports*. No 2013 U.S. death rate was available as this report was being prepared.

Note: Rates shown here are deaths per 1,000 population.

- In 2013, there were 49,917 deaths of Wisconsin residents, 1,692 more than in 2012.
- In 2013, the Wisconsin death rate (deaths per 1,000 population) was 8.7, higher than the 2012 death rate (8.4).

Note: Rates by age and sex are deaths per 100,000 population in that age group or age/sex group.

- Age-specific death rates generally increase with age, except that the death rate for infants (under age one) is higher than that for children in other age groups.
- Age-specific death rates for males exceed death rates for females at all ages. However, among
 persons aged 85 and older, the number of female deaths is greater than the number of male deaths
 (even though male death rates remain higher). This is because many more females than males live
 past the age of 85.

Notes: Population numbers may not sum to total due to rounding. Rates shown here are deaths per 100,000 population. For a map of the Department of Health Services Regions, see Technical Notes, page 85. Effective with 2003 data, Vernon County is included in the Southern Region instead of the Western Region. There are eight deaths included in the state total for which county of residence is unknown.

• In 2013, death rates ranged from a low of 812.1 per 100,000 population in the Department of Health Services' Southern Region to a high of 1,019.8 in the Northern Region. Differences in the death rate by region reflect many factors, including the age distribution of the region's population.

Notes: The "residence" column indicates the number of deaths among residents of the county, regardless of where the person died. The "occurrence" column indicates the number of deaths that occurred in that county, regardless of where the person resided. Statewide totals for the two columns differ because some Wisconsin resident deaths occur outside the state, and some deaths of non-residents occur within the state. There are eight deaths included in the deaths by residence total for which county of residence is unknown.

Notes: Percents may not add to 100 due to rounding.

In 2013, cremations accounted for a majority of body dispositions in Wisconsin. Cremations constituted 51 percent of dispositions in 2013 (compared to 49% in 2012 and 33% in 2004); burials constituted 42 percent of total deaths in 2013 (compared to 44% in 2012 and 58% in 2004).

[&]quot;Donation" means the body was donated for use in medical research and/or education.

[&]quot;Entombment" means the casket is placed in an above-ground structure, such as a mausoleum.

[&]quot;Unknowns" are due to reporting of Wisconsin resident deaths occurring in other states. Some states do not consistently report disposition of the body.

Beginning with deaths occurring after September 1, 2013, a new disposition category of "Other" was added.

Notes: There were two deaths in 1980 and one death in 2000 for which age was unknown. These deaths are not included in the "Total Deaths" for those years.

- In 2013, an autopsy was performed in just 7 percent of deaths, compared with 14 percent in 1980.
- Autopsies are performed most frequently among children and young adults. In 2013, an autopsy was performed in 53 percent of deaths in which the decedent was aged 1-44.

Notes: Race categories may include people of Hispanic origin; people of Hispanic origin may be of any race. This table shows the number of death certificates that specified that an injury at work contributed to the death, either as the underlying cause or as a contributing factor. Dashes (---) indicate there were no deaths in that category.

- A total of 60 deaths were reported as occurring due to injuries at work in 2013; during the 2008-2012 period, the average yearly number of deaths due to at-work injuries was 54.
- Eighty-eight percent of deaths due to injuries at work in 2013 were to males.

Map 1. Number of Infant Deaths By County of Residence, Wisconsin 2013

Notes: Infant deaths are those that occur before one year of age.

Refer to Table A5, page 90, for the population of each county.

- The number of infant deaths increased from 385 in 2012 to 414 in 2013.
- Milwaukee County accounted for 35 percent of all infant deaths statewide in 2013, a higher percentage than in 2012 (29%). Milwaukee County had 21% of Wisconsin resident births in 2013.

Notes: The underlying cause of death is the disease or injury that initiated events resulting in death. All-mention cause of death includes all conditions listed on the death record, including those in the chain of events leading to death and others contributing to the death. Thus, the all-mention cause of death column will always have a higher total than the total number of deaths. For the ICD-10 codes used for each cause, see Technical Notes, page 83. Dashes (---) indicate there were no deaths in that category.

• The underlying cause is often referred to as the "cause of death." For example, for 11,396 Wisconsin residents who died in 2013, a malignant neoplasm was listed as the underlying cause on the death certificate. For 12,422 residents, a malignant neoplasm contributed to death (allmention cause).

Notes: Age-specific rates are deaths per 100,000 population in that age group. A rate is not calculated when there were fewer than 20 deaths. Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 80, and page 81 (infants only).

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

There is one death included in the 2012 total for which age is unknown.

- As in 2012, the two leading underlying causes of death in 2013 were diseases of the heart and malignant neoplasms (cancer). These two causes of death accounted for 45 percent of total deaths among Wisconsin residents in 2013.
- The third leading cause of death in 2012 and 2013 was accidents.
- Accidents were the leading cause of death for age groups 1-44, while cancer was the leading cause for age groups 45-84.

Source: Office of Health Informatics, Division of Public Health, Department of Health Services. For the population estimates used to calculate 2013 rates, see Technical Notes, page 86. For the population estimates used to calculate 2012 rates, see the Technical Notes, page 87.

Notes: Age-specific rates are deaths per 100,000 females in that age group. A rate is not calculated when there were fewer than 20 deaths.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 80, and page 81 (infants only). Conditions abbreviated in this table are spelled out in full in the Technical Notes.

• Accidents were the leading cause of death among females ages 1-44.

Notes: The age/sex-specific rates are deaths per 100,000 population in that age/sex group. Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 83. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

Notes: Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used, see Technical Notes, page 83. Included in the total are 30 deaths whose race was marked "unknown," 58 deaths marked "other race," and 2 deaths marked "Hawaiian." There are also 59 deaths included in the total for which more than one race was marked on the record; these deaths are not included in any category other than the total.

Notes: The 2012 total includes 12 deaths for which race was unknown and 4 Hawaiian deaths. Included in the 2013 total are 30 deaths whose race was marked "unknown," 58 deaths marked "other race," and 2 deaths marked "Hawaiian." There are also 59 deaths included in the total for which more than one race was marked on the record; these deaths are not included in any category other than the total.

Underlying cause of death is the disease or injury that initiated the events resulting in death.

For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 80.

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Diseases of the heart and cancer were the two leading underlying causes of death in each race group. In 2013, diseases of the heart accounted for 21% of deaths among blacks and American Indians, 23% of deaths among whites, and 18% of deaths among Asians. Cancer accounted for 25% of deaths among blacks, 20% of deaths among American Indians, and 23% of deaths among whites and Asians.
- Accidents accounted for 6 percent of total deaths in 2013, 6 percent of deaths among whites, 6 percent of deaths among blacks, 10 percent of deaths among American Indians, and 5 percent of deaths among Asians.
- Differences in leading causes of death by race reflect differences in population age structure (as well as other factors): compared with the total state population, larger proportions of blacks and other minority groups are children and young adults.

Notes: There were 8 decedents in 2012 and 19 in 2013 whose race was unknown; these were included in the totals. Included in the 2013 total are 33 male deaths of "other" races, one Hawaiian death, and 30 records where multiple races were indicated.

Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 80. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Malignant neoplasms (cancer) and diseases of the heart were the leading underlying causes of death in 2013 for males of all races in Wisconsin.
- Accidents were the third leading cause of death among white, black and American Indian males. Cerebrovascular disease was the third leading cause of death for Asian males.

Notes: There were 4 records in 2012 and 11 records in 2013 in which race was unknown; these are included in the totals. Also included in the 2012 total is one Hawaiian female death.

In 2013, there were 24 female deaths of "other" races, two Hawaiian deaths, and 29 records where multiple races were indicated

Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause of death groupings, see Technical Notes, page 80. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Among females in every race group, diseases of the heart and malignant neoplasms (cancer) were the two leading underlying causes of death in 2013.
- Cerebrovascular disease was the third leading cause of death for all females except American Indians, for whom accidents were the third leading cause.

Conditions abbreviated in this table are spelled out in full in the Technical Notes. There were 20 deaths in 2013 for which ethnicity was unknown.

- Cancer and diseases of the heart were the leading causes of death among Hispanics/Latinos in 2013. Cancer accounted for 23 percent of deaths among both Hispanics/Latinos and non-Hispanics in 2013.
- In 2013, accidents accounted for 13 percent of deaths among Hispanics and 6 percent of deaths among non-Hispanics.

Note: Underlying cause of death is the disease or injury that initiated events resulting in death.

Technical Notes

Reporting Requirements

As specified in Chapter 69, Wisconsin Statutes, the following is a brief outline of the sequence of events that take place when a death occurs in Wisconsin:

- Within 24 hours after being notified of a death, the filing party (usually a funeral director) must create an electronic death record in the State Vital Records system and select a physician, coroner or medical examiner who will be responsible for completing and certifying the medical portion of the death record.
- The medical certifier has six days after pronouncement of the death to complete the medical portion of the record and electronically authenticate that portion of the record.
- Within two days after the medical certifier has certified the accuracy of the medical portion, the filing party must approve the death record and it will then be available in the State Vital Records system for the appropriate Register of Deeds. The Register of Deeds will review the record, and if the record is completed satisfactorily, approve it for filing with the State Vital Records Office. There should be no more than nine calendar days total from date of death until the Register of Deeds is notified of the death.
- There should be no more than 10 working days (not including weekends) from the time a Register of Deeds has received the record from the filing party to the time the Register of Deeds approves it. After the Register of Deeds has signed the electronic death record, the death record is ready for registration by the State Vital Records Office.

International Classification of Disease (ICD-10) Codes

Causes of death for deaths that occurred in 1999 and subsequent years have been coded according to the World Health Organization's *International Classification of Diseases—Tenth Revision* (Geneva, Switzerland, 1992). This classification system is the current standard used by the National Center for Health Statistics. All of the cause-of-death groupings used in this report were recommended for state use by the National Center for Health Statistics and the World Health Organization.

Listed below are the ICD-10 codes used for ranking leading causes of death in Tables 11, 12, 13, 17, 18, 19, 20, 21 and 22 (List A). Please note that different groupings are used for ranking leading causes of infant deaths (age less than one year) in Tables 11, 12 and 13 (List B).

List A

Salmonella Infections (A01-A02)

Shigellosis and Amebiasis (A03, A06)

Tuberculosis (A16-A19)

Whooping Cough (A37)

90-94	4.1	5.1	4.8
95 +	3.0	3.5	3.4

Note: This table shows current life expectancy at various ages for Wisconsin's total population and for males and females. These life expectancy estimates are based on age-specific death rates that occurred during the three-year period 2011-2013.

For example, the life expectancy at birth in 2011-2013 was 80.1 years. This is the average number of years that babies born in these years would live if throughout their lives they experienced the age-specific death rates experienced in 2011-2013. For boys, life expectancy at birth was 77.9 years. For girls, life expectancy at birth was 82.3 years.
