

Wisconsin Family Health Survey, 2022 Key Findings on Health Insurance

Introduction

The Wisconsin Family Health Survey (FHS) is a statewide, random-sample, scientific telephone survey of Wisconsin household residents. Once results are weighted, the survey represents all adults and children living in Wisconsin households. The survey is designed to provide estimates of health care coverage, various health conditions, and use of health care services among Wisconsin residents.

Health Insurance Coverage Over the Past Year

- The majority of Wisconsin residents were covered by health insurance for the entire year.
 - An estimated **93.0%** of Wisconsin residents had insurance coverage over the entire past year.
 - An estimated **3.8%** of Wisconsin residents were uninsured for part of the past year (this represents approximately 221,000 Wisconsinites).
 - An additional **2.8%** were uninsured for the entire past year (this represents approximately 161,000 Wisconsinites).
 - In total, an estimated **6.6%** of Wisconsin residents were without health insurance for at least part of the past year (this represents approximately 382,000 Wisconsinites).
- Among all working-age adults ages 18-64, **9.8%** were without health insurance for at least part of the past year.
- An estimated **8.1%** of those employed full-time with an employer were without health insurance for at least part of the past year compared to **18.6%** of those with full-time self-employment, and **8.7%** of those with part-time employment.
- Black and Hispanic residents were less likely than white residents to have had health insurance for the entire past year (**82.9%** and **83.8%** respectively vs. **94.9%**).
- Residents living in poor and near-poor households were less likely to have had health insurance for the entire past year than residents living in non-poor households (**85.0%** and **88.1%** respectively vs. **94.9%**).

Health Insurance Coverage at a Point in Time

- Adults ages 18-44 was the age group least likely to have health insurance coverage, with an estimated **6.9%** being uninsured.
- An estimated **60.1%** of insured adults had health insurance through their employer, and **4.9%** had purchased insurance through the Health Insurance Marketplace.
