Source: 2022 Family Health Survey, Office of Health Informatics, Division of Public Health, Wisconsin Department of Health Services.

Notes: 2012–2022 FHS data may be compared and/or combined for analysis because the same address-based design was used for sampling. However, comparisons with estimates from years of FHS data before 2012 should be made with caution because a landline telephone design was used for sampling.

This table shows estimated percentages and numbers based on survey responses.

C.I. = Confidence Interval (specifies a range within which the true value probably lies).

Because health insurance coverage is nearly universal in the 65+ population, it is an unusual case where the confidence intervals encompass 0 and/or 100, and yet are not an indication that the result is illogical. See Technical Notes.

A dash (--) indicates 0.5% or less, fewer than 1,000 people, and/or insufficient sample size to produce reliable estimates.
